Ryan Matheus Freitas Eloy

Senior Software Engineer · TypeScript, Node.js, React, AWS

Jundiaí, SP, Brazil (UTC−3, remote) | +55 (11) 97304-1534 | developer@ryaneloy.dev
ryaneloy.dev | github.com/ryan-mf-eloy | linkedin.com/in/ryan-eloy-5906b91a5

SUMMARY

Senior software engineer with 7 years building and operating production systems for fintech, insurance, and high-traffic consumer platforms. Works across the stack in TypeScript, Node.js, and React, with the most depth in backend: event-driven services, third-party integrations, and serverless architectures on AWS. Has shipped a conversational AI product for a multi-million-customer operation and uses AI coding agents daily within a tested, review-first workflow. Works in English with distributed international teams.

SKILLS

Languages	TypeScript, JavaScript, SQL
Backend	Node.js, NestJS, REST, GraphQL, microservices, event-driven design (webhooks, queues, idempotency, retries)
Frontend	React, Next.js, React Native, Vue.js
Cloud & delivery	AWS (Lambda, SQS, SNS, S3, RDS Aurora, DynamoDB, CloudWatch), GCP, Docker, GitHub Actions, GitLab CI
Data	PostgreSQL, MySQL, MongoDB, Redis, DynamoDB
AI	Conversational AI and NLU (IBM Watson), AI-assisted development (Claude Code, Cursor), agent tooling with MCP
Quality	Jest, Playwright, Cypress, observability (CloudWatch, Grafana), feature flags

EXPERIENCE

Luby Software

Jul 2025 – Present

Senior Full-Stack Software Engineer · International fintech client · Remote

- Lead contributor to four core payment services within a team of about 12, building a cross-border payment gateway with Node.js/TypeScript microservices on AWS. The gateway handles 2M+ API requests per month and supports 13 direct acquirer integrations.
- Fixed retry and rebill logic for tokenized recurring card charges, contributing to segment approval rising from 16.4% to 34.7% (+18.3 percentage points). Also contributed to customer-initiated payment approval improving from 85% to 89% (+4 percentage points).
- Built and evolved integrations in Brazil and Mexico: a debit-card adapter, instant-payment flows, network tokenization, and a new Mexican provider (cards, bank transfer, Apple Pay) taken from scoping to UAT certification in about 16 weeks with 93 end-to-end scenarios passing.
- Investigated and fixed production issues in the payment chain, including lost webhooks and callback timeouts. Resolved a fee regression and reconciled fee data across 114k records, addressing both event-delivery failures and data-integrity issues in payment processing.
- Rolled out a masked-data observability standard across card and instant-payment processing, covering four services and their shared library.
- Maintained project instructions, reusable workflows, and an MCP-served knowledge index for daily use of AI coding agents (Claude Code, Cursor). Combined AI-assisted delivery with the project's 4,700+ automated tests and manual review as quality gates.

AIR Compass (UOL)

Jul 2024 – Jul 2025

Frontend Developer · Global automotive client · São Paulo, Brazil

- Delivered web features for the loyalty and subscription platform of a global automotive group, used across several vehicle brands, with Vue micro-frontends on Adobe Experience Manager (AEM), GitLab CI, AWS, and Salesforce.

- Built the subscription coupon flow on the web: back-office coupon registration (percentage or fixed discounts, audience targeting, global redemption limits) and coupon selection at checkout, integrated with the voucher and subscription microservices.
- Shipped the redesigned subscription screen behind an authoring flag, so the new and legacy versions could run side by side and the client could switch between them without a deployment.
- Created a brand theme for the shared component library with CSS custom properties and coached a teammate through the process; worked in a nine-person squad across web, back end, iOS, Android, and QA.

Museu de Arte de São Paulo (MASP) Mar 2024 – Aug 2024

Full-Stack Developer · São Paulo, Brazil

- Built the museum's in-house ticketing platform from scratch (Next.js, Node.js, serverless API on AWS Lambda), replacing a costly third-party product for ticket sales and membership validation at one of Latin America's leading art museums.
- The platform processes 100k+ transactions per month on Aurora PostgreSQL with RDS Proxy, supporting thousands of concurrent users on peak event days.
- Shipped a React Native app for real-time check-in and ticket and membership-card validation; covered critical platform flows with Jest and Playwright.
- Integrated multiple payment gateways and POS terminals, and owned infrastructure and delivery across AWS and GCP (Lambda, SQS, SNS, SES, S3, CloudWatch, Docker, GitHub Actions).
- Resolved race conditions in ticket purchases and seat reservations, maintaining consistent seat allocation under concurrent requests.

MJV Technology & Innovation · Bradesco Seguros Jul 2021 – Mar 2024

Software Development Analyst · São Paulo, Brazil

- Developed BIA, Bradesco Seguros' conversational AI assistant, using IBM Watson NLU to automate customer and broker support for an insurance operation serving millions of customers.
- Built the Node.js/TypeScript services connecting the NLU engine to its channels (WhatsApp, web, and phone), with Socket.IO for real-time messaging and MongoDB for conversation data.
- Delivered the hybrid on-premise and cloud deployment (Docker) that let an AI product run inside a regulated financial institution, meeting strict security, compliance, and data-sovereignty requirements.
- Worked in two-week sprints with product and UX, covering services with Jest and contributing React interfaces.

VBMC Consultores Sep 2019 – Jul 2021

Full-Stack Developer · Jundiaí, Brazil

- Promoted within the first year; owned projects end to end, from requirements to deployment (React, Node.js, MySQL, Docker, Linux).
- Built an internal ERP from scratch, plus a meeting-recording portal, a job board, and automated reporting tools; managed client Linux servers and deployments.

CERTIFICATIONS & TRAINING

Claude Certified Architect – Foundations · Anthropic

AI Engineering · Asimov Academy

Serverless AWS · EW Treinamentos

JS Expert and **Automated Testing** · EW Treinamentos

Ignite Full-Stack Development · Rocketseat

Information Security & Data Privacy · Corporate training

EDUCATION & LANGUAGES

Associate Degree, Systems Analysis and Development · Cruzeiro do Sul University, São Paulo

Technical Degree, Internet Computing · ETEC Antonio Vasco Venchiarutti, Jundiaí

English · Professional, used daily at work **Portuguese** · Native
